NTU Computer Science, Turing AI Scholars | Keppel Internship Programme 2027 (Jan to May) | Available Jan to Aug 2027

Education

Nanyang Technological University (NTU), Bachelor of Computing (Computer Science) Aug 2024 to Dec 2028
Turing AI Scholars Programme (TAISP), a selective research track within the School of Computer Science and Engineering
Relevant coursework: Data Structures & Algorithms, Databases, Machine Learning, Software Engineering

Temasek Polytechnic, Diploma in Information Technology 2021 to 2024

Work Experience

Singapore University of Social Sciences (SUSS), Digital Solutions & AI Singapore
AI & Software Engineer Intern May 2026 to Aug 2026

- Rebuilt how lecture recordings are scored for teaching quality, moving from an AI model's opinion to a **measured 7-factor formula** computed from the audio itself, so every score a lecturer receives can be traced back to a number and explained
- Removed a scoring factor that was quietly penalising lecturers with accented English, and relabelled it honestly rather than shipping a metric the university would not be able to defend
- Built an automated checking harness that replays **1,529 quality checks** over stored reports in about a second at zero API cost, so the team can change the pipeline without silently breaking past results
- Worked inside an existing team codebase and reported the accuracy figure on **held-out** data separately, after finding the headline number had been measured on examples the system had already seen

Yap Motor Singapore
Machine Learning Intern Dec 2025 to Jan 2026

- Delivered the company's first production AI system: a search assistant over **500+ pages** of multilingual repair manuals, used daily by **24 mechanics** and still running **6 months** after the internship ended
- Reached **90% retrieval accuracy** across 8 diagnostic categories, validated against a month of structured feedback from mechanics on real repair jobs rather than test questions
- Handled English, Chinese and Japanese source documents of inconsistent structure, and fixed two production blockers that were breaking search for the workshop floor

DBS Bank Singapore
Data Engineer Intern May 2023 to May 2024

- Built a **Grafana** and SQL dashboard tracking memory and runtime across a pipeline running **3,000+ jobs a day**, surfacing bottlenecks that teams then fixed for **20% memory** and **15% speed** improvements
- Added an **Elasticsearch** client to the team's shared internal Python library, giving production models real-time data retrieval through common infrastructure for the first time

Projects

Drum Hub, founder and sole engineer | hf.co/Icyautumn/drum-omr-mobilenetv3 Jun 2026 to Present

- Trained a compact image-recognition model that reads drum sheet music from a photo, reaching **90.9% accuracy** on 1,924 held-out bars from songs it had never seen, and released the weights publicly under MIT
- Built the accompanying desktop score editor in **TypeScript** and **Electron**; the model runs offline on a student's own laptop, so there is no per-use cost and no data leaves the device

Leadership & Activities

Workshop Lead, TAISP x MLDA, NTU School of Computer Science and Engineering 2025
Designed and taught a hands-on machine learning workshop for NTU undergraduates, taking a room of students from zero to a working trained model in a single session.

Drum Instructor (Rockschool grades), part time 2023 to Present
Teach beginner and intermediate students one to one, which is where the Drum Hub product idea came from.

Skills

Programming: Python, TypeScript, SQL, JavaScript

Data & Analytics: Grafana dashboards, Elasticsearch, relational and vector databases, pipeline monitoring

AI Systems: Retrieval-augmented search, LLM APIs (Gemini, GPT-4o, Claude), on-premises and offline inference, PyTorch

Reliability: Automated evaluation harnesses, fault-injection testing, human-in-the-loop review gates

Other: Git, Streamlit and Electron application development, technical writing for non-technical stakeholders
